| Maximum Marks | 4 Marks |

**Brainstorm & Idea Prioritization Template:**

To initiate the development of ShopEZ, our team conducted a structured brainstorming session to identify real-world problems in existing e-commerce platforms. The objective was to understand gaps in current systems and define a clear problem statement.

We gathered as a team and encouraged open discussion where every member contributed ideas without judgment. The session focused on identifying pain points faced by both customers and sellers.

**Problems Identified:**

- Complicated and cluttered user interfaces
- Time-consuming checkout processes
- Lack of personalized recommendations
- Poor seller-side analytics and order management
- Limited filtering and search capabilities
- Security concerns in online transactions

After evaluating these challenges, we finalized the following problem statement:

"To design and develop a user-friendly, secure, and efficient full-stack e-commerce platform that enhances product discovery, simplifies checkout, and provides powerful tools for sellers."

**Step-1: Team Gathering, Collaboration and Select the Problem Statement**

## Problems Identified:

- Complicated and cluttered user interfaces
- Time-consuming checkout processes
- Lack of personalized recommendations
- Poor seller-side analytics and order management
- Limited filtering and search capabilities
- Security concerns in online transactions

After evaluating these challenges, we finalized the following problem statement:

“To design and develop a user-friendly, secure, and efficient full-stack e-commerce platform that enhances product discovery, simplifies checkout, and provides powerful tools for sellers.”

This defined the foundation for ShopEZ.

**Step-2: Brainstorm, Idea Listing and Grouping**

**In the second phase, we generated a large number of ideas without restricting creativity. The goal was to maximize idea generation before filtering them.**

**Ideas Generated:**

- **Smart product filtering (category, price, rating)**
- **Personalized product recommendations**
- **Wishlist feature**
- **Cart auto-save functionality**
- **One-click checkout system**
- **Secure authentication with JWT**
- **Role-based access (User/Admin)**
- **Seller dashboard for order tracking**
- **Sales analytics for sellers**

- **Discount coupon system**
- **Email notifications for orders**
- **Product reviews and ratings**
- **Responsive design for mobile users**
- **Inventory management system**

**After listing all ideas, we grouped them into logical categories:**

**User Experience Enhancements:**

- **Smart search and filtering**
- **Personalized recommendations**
- **Wishlist**
- **Reviews and ratings**
- **Responsive UI**

**Checkout & Payment Improvements:**

- **One-click checkout**
- **Secure transaction handling**
- **Cart management**
- **Coupon system**

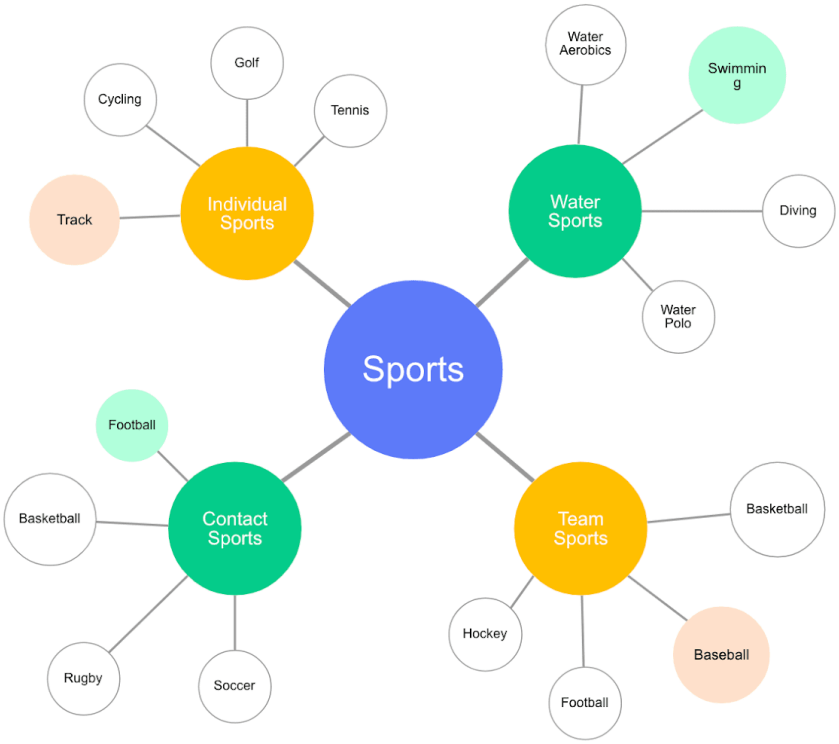
**Seller & Admin Management:**

- **Seller dashboard**
- **Order processing system**
- **Inventory control**
- **Sales analytics**
- **Role-based authentication**

**Security & System Stability:**

- **Password encryption**
- **JWT authentication**
- **Protected routes**
- **Secure API handling**

**This grouping helped us understand the system structure clearly and divide development tasks efficiently.**



**Step-3: Idea Prioritization**

**After brainstorming, we prioritized ideas using an Impact vs Feasibility approach. The goal was to implement high-impact and highly feasible features first.**

**High Impact & High Feasibility (Must-Have Features):**

- **User Authentication System**
- **Product Listing & Filtering**
- **Add to Cart & Cart Management**
- **Checkout Process**
- **Order Management System**
- **Admin Dashboard**

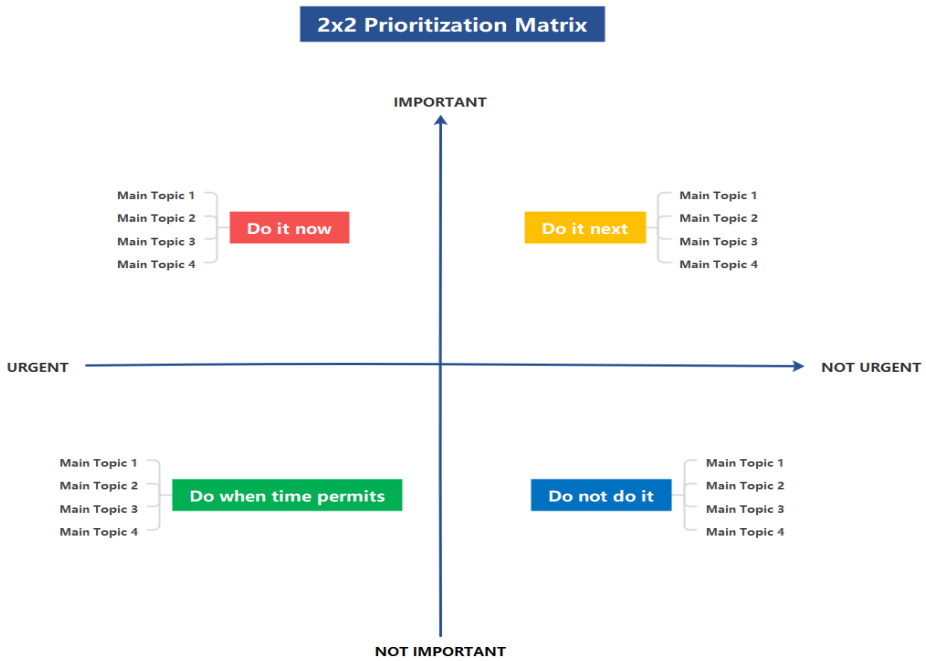
**These were implemented as core features of ShopEZ.**

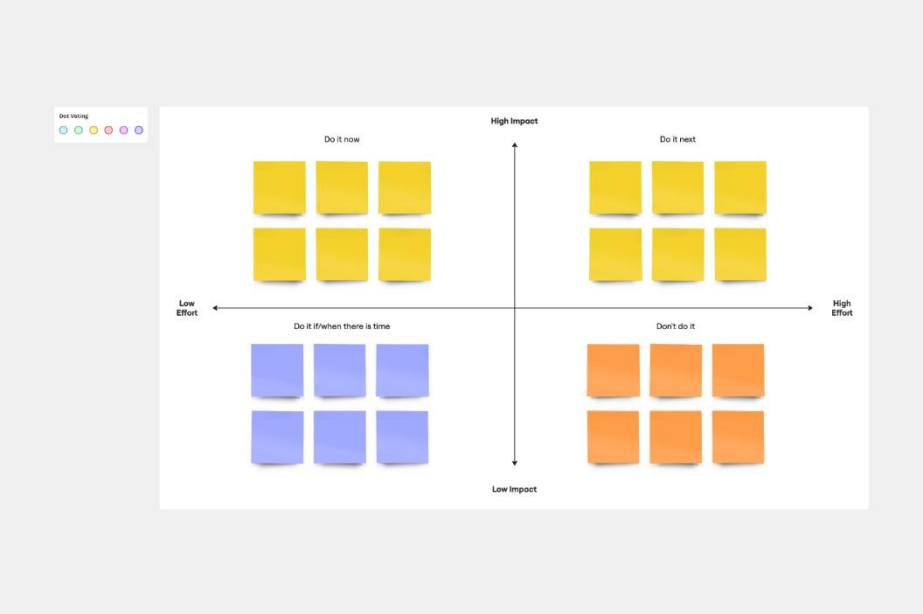
**Medium Priority Features:**

- **Product Reviews & Ratings**
- **Sales Analytics Dashboard**
- **Discount Coupons**

**Future Enhancements:**

- **AI-based Personalized Recommendations**

- **Advanced Seller Analytics**
- **Payment Gateway Integration (Stripe/Razorpay)**
- **Chatbot Assistance**




**By prioritizing features systematically, we ensured timely development and effective resource utilization.**
